Art Unit: 1755

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, drawn to a rectangular supramolecules and the method for making it, classified in class 556, subclass 45+.
- II. Claims 17-21, drawn to a luminescent composition, classified in class 252, subclass 301.16.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the R group in the combination can be a C<sub>1</sub>-C<sub>16</sub> alkyl and the R group in the subcombination can be a C<sub>3</sub>-C<sub>16</sub> alkyl. The subcombination has separate utility such as an organic solvent based luminescent composition.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Tsao on 22 April 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
